Activity 1 · Hands-on · 🏫 In class · ⏱ 40 minutes

🃏 Myth vs Fact Card Game

You will learn: Correct scientific information about reproductive health and STIs protects young people.

YOU NEED

- 20 index cards or paper slips
- Pens
- Your NCERT/PU textbook chapter on reproductive health

⚠️ **Safety:** Keep the discussion respectful and scientific. Use only your textbook or a doctor as the source.

STEPS

1. In groups of 4, write 10 common myths on cards (for example "STIs only affect adults over 30").
2. On separate cards, write the correct scientific fact for each, with the textbook page number.
3. Shuffle the cards and let another group match each myth with its fact.
4. Discuss: why do myths spread, and how can schools stop them?
5. Make a small poster of the 3 most important facts.

OBSERVATION TABLE

Myth	Fact	Textbook page

QUESTIONS

1. Which age group is most at risk of STIs?

2. Name three STIs that are not completely curable.

3. What is the aim of the RCH programme?

WHAT IS HAPPENING? — THE SCIENCE

Reproductive health means total well-being — physical, emotional, behavioural and social. Awareness about contraception, STIs, safe MTP and the ban on sex-determination tests is part of India's RCH programme. Facts from reliable sources reduce fear and wrong practices.

Key terms: reproductive health · RCH · STIs · contraception

Activity 2 · Hands-on · 🏠 At home · ⏱ 40 minutes

📈 Graph India's Population

> **You will learn:** Census data show how India's population grew — the reason population-control and RCH programmes matter.

YOU NEED

- Graph paper
- Pencil and scale
- The census data below

STEPS

1. Census population (crore): 1951 – 36.1, 1961 – 43.9, 1971 – 54.8, 1981 – 68.3, 1991 – 84.6, 2001 – 102.9, 2011 – 121.1.
2. Plot year on the x-axis and population on the y-axis.
3. Join the points and describe the shape of the curve.
4. Find the increase in each decade and write it in the table.
5. Discuss two reasons for the rapid increase and two ways to slow it.

OBSERVATION TABLE

Decade	Population at start (crore)	At end (crore)	Increase (crore)

QUESTIONS

1. In which decade was the increase largest?

2. Give two reasons for the population explosion.

3. Name two contraceptive methods suitable for spacing children.

WHAT IS HAPPENING? — THE SCIENCE

Population rose rapidly after 1951 because the death rate, maternal mortality and infant mortality fell while birth rates stayed high. Education, awareness of contraceptive methods, raising the marriageable age and small-family incentives help control growth.

Key terms: **population explosion** **MMR** **IMR** **contraceptive methods**

Digital activity

💻 Contraception Classifier

> Tap a method, then tap its type.

Do this digital activity in the BAIO app: **https://narendra-bio-sir.github.io/BAIO-Learning-System-By-Narendra-Sir/activities.html#pu2-ch3/2**

NATURAL · BARRIER · IUD · ORAL / HORMONAL · SURGICAL

Natural	Barrier	IUD	Oral / hormonal	Surgical

Periodic abstinence · Lactational amenorrhea · Withdrawal (coitus interruptus) · Condom · Diaphragm · Cervical cap · Copper-T · Multiload 375 · LNG-20 · Saheli pill · Injectable progestogen · Implants · Vasectomy · Tubectomy

> **You will learn:** Methods differ in how they work: preventing meeting of gametes, preventing ovulation or implantation, or blocking the gamete transport permanently.

THINK & WRITE

1. Which method also protects against STIs?

2. Why are surgical methods called terminal methods?
