

Name: _____

Section: _____

Date: _____

SECTION A – Fill in the Blanks (1 mark each)

1. The Five Kingdom classification was proposed by _____ in the year 1969.
2. Whittaker's classification used four criteria: cell structure, thallus organisation, mode of nutrition/reproduction, and _____ relationships.
3. The Five Kingdoms proposed by Whittaker are Monera, Protista, Fungi, Plantae, and _____.
4. Kingdom _____ contains only prokaryotic organisms.
5. Kingdom Protista brought together unicellular organisms like Chlamydomonas and _____.
6. The body organisation of Kingdom Animalia is described as tissue/organ/organ _____.
7. Fungal cell walls are composed of _____, while plant cell walls are composed of cellulose.
8. Bacterial cell walls are mainly composed of the compound _____.

SECTION B – One-Word / Very Short Answer (1 mark each)

1. Who proposed the Five Kingdom classification system? **Ans:** _____
2. In which year was the Five Kingdom classification proposed? **Ans:** _____
3. Name the five kingdoms in Whittaker's classification, in conventional order. **Ans:**

4. Which kingdom unites unicellular eukaryotes previously split between plants and animals? **Ans:**

5. Name one criterion used by Whittaker but NOT by the Two Kingdom system. **Ans:**

SECTION C – Match the Following (4 marks)

Column A	Column B
1. Monera	a. Cellulose cell wall, autotrophic
2. Protista	b. Chitin cell wall, heterotrophic
3. Fungi	c. Prokaryotic, non-cellulosic wall
4. Plantae	d. Unicellular eukaryotes

Answer: 1-____, 2-____, 3-____, 4-____

Name: _____

Section: _____

Date: _____

SECTION D – True or False (1 mark each)

1. Whittaker's Five Kingdom system uses phylogenetic relationships as a classification criterion. [True / False]
2. Kingdom Protista consists of multicellular eukaryotes only. [True / False]
3. Kingdom Monera contains organisms lacking a nuclear membrane. [True / False]
4. Kingdom Animalia shows the simplest body organisation among the five kingdoms. [True / False]

SECTION E – Short Answer (3 marks each)

1. List the four criteria used by Whittaker in the Five Kingdom classification.

2. Why is the Five Kingdom system considered superior to the Two Kingdom system?

3. Explain why Chlamydomonas and Paramecium are both placed under Kingdom Protista.

SECTION F – HOTS / Long Answer (5 marks each)

1. Using a comparison of cell structure, nutrition, and body organisation, justify why Fungi is a separate kingdom from Plantae.

2. "The Five Kingdom system reflects evolutionary relationships better than earlier systems." Discuss this statement with suitable examples.
