

Name: _____

Section: _____

Date: _____

SECTION A – Fill in the Blanks (1 mark each)

1. Bacterial flagella are made up of the protein _____.
2. The bacterial cell wall is typically composed of _____.
3. Spherical bacteria are called _____, while rod-shaped bacteria are called _____.
4. Bacteria adapted to salty habitats are called _____.
5. Bacteria found in hot springs are called _____.
6. Methanogens live in marshy areas and the guts of _____, producing methane gas.
7. Nitrogen fixation in cyanobacteria occurs in specialised cells called _____.
8. The smallest known living organism, which completely lacks a cell wall, is _____.

SECTION B – One-Word / Very Short Answer (1 mark each)

1. Name the causative agent of typhoid. **Ans:** _____
2. Name the causative agent of citrus canker. **Ans:** _____
3. Name the causative agent of anthrax in cattle. **Ans:** _____
4. What is the main asexual mode of reproduction in bacteria? **Ans:** _____
5. What is the sexual-like DNA transfer process between two bacteria called? **Ans:** _____
6. Name two examples of nitrogen-fixing cyanobacteria. **Ans:** _____

SECTION C – Match the Following (4 marks)

Column A	Column B
1. Vibrio cholerae	a. Anthrax
2. Salmonella typhi	b. Citrus canker
3. Xanthomonas axonopodis	c. Typhoid
4. Bacillus anthracis	d. Cholera

Answer: 1-____, 2-____, 3-____, 4-____

Name: _____

Section: _____

Date: _____

SECTION D – True or False (1 mark each)

1. Archaeobacteria have the same cell wall structure as typical Eubacteria. [True / False]
2. Mycoplasma is the smallest known living organism and lacks a cell wall. [True / False]
3. Cyanobacteria are eukaryotic, photosynthetic organisms. [True / False]
4. Heterotrophic bacteria play an important role as decomposers. [True / False]

SECTION E – Short Answer (3 marks each)

1. Differentiate between Archaeobacteria and Eubacteria with one example each.

2. Explain the role of heterocysts in cyanobacteria.

3. Name any three shape-based groups of bacteria with their shapes.

SECTION F – HOTS / Long Answer (5 marks each)

1. Explain, with reasons, why Mycoplasma is considered unique among all known bacteria.

2. Discuss the ecological and economic importance of bacteria, giving at least two beneficial and two harmful examples.
