Date: _____

Section A — Fill in the Blanks

5 Questions · Bryophyta: General Characters

1. Bryophytes are called _____ of the plant kingdom.
2. The bryophyte plant body is haploid and is called the _____.
3. The male sex organ in bryophytes is the _____.
4. The female sex organ in bryophytes is the _____.
5. Bryophytes are attached to the substratum by _____.

Section B — One-word Answers

1. What does the antheridium produce? _____
2. What does the archegonium produce? _____
3. What does the zygote develop into? _____
4. Is the bryophyte sporophyte dependent or independent? _____
5. Name the two classes of bryophytes. _____

Section C — Match the Following

Column A	Column B
1. Antheridium	a. Haploid plant body
2. Archegonium	b. Attachment structure
3. Rhizoid	c. Produces egg
4. Sporophyte	d. Produces antherozoids
5. Gametophyte	e. Dependent diploid stage

Section D — True / False

1. Bryophytes need water for sexual reproduction. _____
2. The bryophyte sporophyte is independent of the gametophyte. _____
3. Antherozoids in bryophytes are flagellated. _____
4. Bryophytes have true roots. _____
5. A few sporophyte cells undergo meiosis to produce spores. _____

Section E — Short Answer

1. Why are bryophytes called 'amphibians of the plant kingdom'?

2. Describe the structure and function of the archegonium.

3. Explain the relationship between the bryophyte gametophyte and sporophyte.

Section F — HOTS (Higher Order Thinking)

1. Explain why bryophytes are restricted to cool, damp, shady habitats using their mode of fertilisation.

2. Compare the ploidy and independence of the gametophyte and sporophyte generations in bryophytes.
