

Full Chapter Revision Worksheet

Student Name: _____ Date: _____

Section: _____ Class/Roll No: _____

A. Fill in the Blanks

1. The primary root develops from the embryonic _____.
2. The stem develops from the _____ of the embryo.
3. The stalk connecting the lamina to the stem is called the _____.
4. A flower is a modified and condensed _____.
5. The swollen end of the pedicel is called the _____.
6. A fruit developing without fertilization is called _____.

B. One Word Answer

1. Name the root system found in mustard. Ans: _____
2. Name the bud found at the apex of a stem. Ans: _____
3. Name the broad green expanded part of the leaf. Ans: _____
4. Name the type of inflorescence where the main axis continues to grow. Ans: _____
5. Name the whorl composed of sepals. Ans: _____
6. Name the fruit type of mango and coconut. Ans: _____

C. Match the Following

Column A	Column B
Tap root	Wheat
Fibrous root	Mustard
Adventitious root	Banyan
Root hair	Absorption
Hypogynous	Superior ovary
Perigynous	Half-inferior ovary

D. True or False

1. Root hairs develop in the region of meristematic activity. (True/False)
2. Stems are distinguished from roots by presence of nodes and internodes. (True/False)
3. Reticulate venation is typical of monocots. (True/False)
4. Internodes elongate during floral transition. (True/False)
5. Actinomorphic flowers show radial symmetry. (True/False)
6. Dicot seeds usually have two cotyledons. (True/False)

E. Short Answer Questions

1. Differentiate between tap root and fibrous root systems. [2 Marks]
2. Define node and internode with an example. [2 Marks]
3. Differentiate between simple and compound leaves. [2 Marks]
4. Differentiate between racemose and cymose inflorescence. [2 Marks]
5. Define perianth and give an example. [2 Marks]

F. Short Essay Questions

1. Describe the four structural regions of a root tip. [3 Marks]
2. Explain three functions of modified stems with examples. [3 Marks]
3. Describe the three parts of a typical leaf with their functions. [3 Marks]
4. Explain why a flower is considered a modified shoot. [3 Marks]
5. Explain the four types of aestivation with examples. [3 Marks]

G. Long Answer / Essay Questions

1. Describe the four floral whorls of a typical flower in detail and explain the five types of placentation with suitable examples. [5 Marks]

2. Give a detailed taxonomic description of family Solanaceae including habit, vegetative and floral characters, and economic importance. **[5 Marks]**
